TETE AI — The World's First AI-Powered Tattoo Assistant

Developed in Turkey by Alien X Tattoo Studio

Samsun / Istanbul, Turkey — 2025

In a groundbreaking fusion of art and technology, **Alien X Tattoo Studio** has unveiled **Tete AI**, an artificial intelligence–driven tattoo assistant that communicates, learns, and creates.

Developed and designed by **artist and innovator Andrea Bahar**, and financed by **Samet Bahar**, Tete AI marks a world-first innovation in the tattoo industry — born in Turkey, built for the future.

A New Kind of Intelligence

Tete AI is not just software. It's an interactive system capable of **conversing with clients via WhatsApp**, organizing tattoo and piercing appointments, and even generating **AI-powered tattoo design ideas**.

By blending creative intelligence with digital technology, Alien X Tattoo has redefined the boundaries between human imagination and machine consciousness.

Art Meets Technology

Known for her work in creating alien portraits and futuristic artistic concepts, **Andrea Bahar** has transformed her artistic vision into a living digital entity.

"For me, alien forms represent the next stage of human consciousness.
Tete AI is not only a tool — it's a reflection of that evolution,"
says Bahar.

Alien X Tattoo now functions as a **creative lab**, developing new artistic systems that merge design, sound, light, and artificial intelligence into a unified ecosystem.

The Tete Ecosystem

The team is currently expanding Tete AI into a **larger interconnected system** — integrating various smart modules, sensors, and creative AI tools that can communicate with each other.

This initiative aims to position Alien X Tattoo as a **hub of innovation** where art, data, and human creativity converge.

About Alien X Tattoo Studio

Founded in **Samsun, Turkey**, and expanding its reach to **Istanbul**, Alien X Tattoo Studio is more than a tattoo parlor.

It is a **hybrid art and technology space**, empowering young artists and pushing the limits of modern creativity.
